

COPD Educator Course

Take charge of your learning

Millions of people in the United States have been diagnosed with COPD and millions more are living with the disease without being diagnosed. The American Lung Association's COPD Educator Course is a 14-hour professional education program for healthcare and public health professionals. Available on-demand, the course is accessible, flexible and designed to support the educational needs of busy healthcare and public health professionals.

**Develop as a
professional**

**Implement
guidelines-based
care**

**Build my organization's
capacity for COPD care
and management**

**Earn continuing
education credit
toward a license**

Getting Started

By increasing your knowledge about COPD diagnosis and management, you can help make a lasting impact on your organization and in the lives of your patients living with COPD and their families.

Through a mixture of video lectures from COPD experts, text, visuals, and knowledge-based quizzes, the modules will cover topics such as

- diagnosis and management,
- spirometry,
- pharmacology,
- medication delivery devices and much more!
